SEO Audit: Radost v pohybu

Pre-launch build of the new site (http://localhost:8020/), 12 pages, Czech · tai chi and qigong classes by Mgr. Daniel Tkadlčík, Praha 4 and Zlín · audited 1 November 2026

77 /100

SEO Health Score: good technical foundation, held back by content the client must supply.

The build is technically clean: 200s everywhere, correct redirects and canonicals, a correct sitemap, valid JSON-LD, fast pages, accessible markup. The points are lost on things only the client can fix: an invalid phone number, events that are all in the past, a contradictory timetable, and zero presence outside the website (no Google Business Profile, listings or reviews).

> **Scope.** The site runs locally before launch, so there is no field data (Google Search Console, CrUX, analytics), no backlinks and no live rankings. Every absolute URL currently reads *http://localhost:8020*; that is expected now and listed as a launch task, not scored as a defect. Ten specialist analyses ran in parallel (technical, content, schema, sitemap, performance, visual, AI search, agent readiness, search experience, local). The old site dan24.webnode.cz was consulted only for comparison.

Category scores

Category	Weight	Score	Summary
Technical SEO	22%	90	No critical or high issues. Status codes, redirects, canonicals, robots, sitemap, hardening all correct.
Content Quality	23%	56	Past events, invalid phone, contradictory timetable, thin Zlín page, articles without source/translator.
On-Page SEO	20%	80	Unique geo-targeted titles, H1s and descriptions; one H1 per page. Missing: own page for Osm kusů brokátu, "tai chi" in the Zlín title.
Schema / Structured Data	10%	84	Valid single @graph per page, all @id resolve. Missing sameAs on Organization, postalCode/geo/hours on venues.
Performance (lab)	10%	95	Lighthouse mobile 94–96, desktop 100; CLS 0, TBT 0. Mobile LCP 2.7–3.1 s (throttled).
AI Search Readiness	10%	67	Crawlers allowed, llms.txt valid. Weak authority signals, no current events, articles not marked up.
Images	5%	80	All images have alt, width/height, lazy loading. Some mobile images 30–49 KB larger than needed.

Also measured, not in the weighted score: **Local SEO ≈ 38/100** (no Google Business Profile, citations or reviews yet), **Search Experience gap 59/100**, **Sitemap: all checks pass**, **Lighthouse Accessibility 100** on every page tested.

Needs the client (blocks launch quality)

These came up in four or more of the ten analyses. None can be fixed by code alone; they need facts from Daniel Tkadlčík.

Item	What to ask for
CRITICAL Phone number	+420 773 287 1113 has 10 digits after +420 (Czech numbers have 9). Copied from the old site; appears in text, tel: links, JSON-LD and llms.txt. Need the correct number; it is changed in one place (content.mjs).
CRITICAL Upcoming dates	Every event is past: Zlín 19. 4. 2024, Krkonoše 2024, Vincent Chu seminar 27.–29. 11. 2025 (still asking for a deposit by 15. 11. 2025). Need the next dates and prices, or a decision to show the pages as archive.
HIGH Timetable	13 Words of Tchaj-ťi is listed as Tuesday 18:00–19:30 on its card but on Monday in the timetable; its card's schedule line reads "Osm kusů brokátu". Both lessons (90 and 120 min) cost 350 Kč. The summer course reads "30. 7. – 7. 7. 2024" (ends before it starts). All copied from the old site; need the true values.
HIGH Articles' source	The 10 principles of Yang Cheng Fu and the Vincent Chu text on Wu Chi: who translated them, and permission to publish. Also spelling "Yang Chen Fu" vs "Yang Cheng Fu".
HIGH Zlín details	The Zlín page is 114–147 words, all repeated elsewhere. Need Zlín-specific facts: next dates, what to bring, how to sign up.
MEDIUM Beginner information	Trial lesson, joining mid-term, what to wear, who it suits. Searchers look for this; it also feeds AI answers.
MEDIUM Trust signals	Own class photos, Gin Soon certification, testimonials or reviews (only real ones; no rating markup until they exist).

Action plan

Each action states why it matters, what it depends on, how we would know it failed, and what to watch afterwards.

Critical: before launch

Action	Why · depends on · failure check · leading indicator
C1 Fix the phone number everywhere	**Why:** an invalid number breaks calls, NAP consistency and every future listing. **Depends on:** client. **Failed if:** any page, JSON-LD or llms.txt still contains 7732871113 (the build already warns). **Watch:** call clicks once analytics runs.
C2 Publish current dates or archive past events	**Why:** searchers and AI answers skip pages whose newest date is 2024–2025; the deposit call is stale. **Unblocks:** Event markup (H5). **Failed if:** a page still shows only "Proběhlo" dates at launch. **Watch:** enquiries per event.
C3 Switch every absolute URL to the production https domain	**Why:** canonicals, sitemap, robots Sitemap line, llms.txt and JSON-LD all say localhost. **Depends on:** choosing hosting and domain. **Failed if:** `curl https://<domain>/ | grep localhost` finds anything after the cache is rebuilt. **Watch:** Search Console coverage after submitting the sitemap.
C4 Redirect or retire dan24.webnode.cz	**Why:** once it is gone, its links and rankings are lost; while it stays, it duplicates the content and shows conflicting data (address written 18/68, a template footer "Václavské náměstí 1"). **Depends on:** C3 and what Webnode allows (a pointer page if it cannot redirect). **Failed if:** old URLs answer 200 with old content after launch. **Watch:** old-site impressions falling as new-site ones rise.

High: first week after launch

Action	Why · depends on · failure check · leading indicator
H1 Create a Google Business Profile (Praha first) and Firmy.cz / Mapy.cz listings	**Why:** local results for "tai chi Praha 4" are listing-driven; the business has none. Use the venue address, not the home seat; Zlín (monthly rented room) may not verify. **Depends on:** C1. **Failed if:** NAP differs between listings and the site. **Watch:** profile views and direction requests.
H2 Correct the timetable and prices	**Why:** contradictions on the most important page cost trust and confuse AI summaries. **Depends on:** client. **Failed if:** home, Nabídka kurzů and llms.txt disagree. **Watch:** fewer "which day is it?" e-mails.
H3 Give Osm kusů brokátu its own guide page	**Why:** results for "osm kusů brokátu" are step-by-step guides and video, and few are Czech; today it is one section of /cviceni/. Existing text and video suffice; link it to the Tuesday class. **Failed if:** the new page cannibalises /cviceni/ (both ranking for the same query). **Watch:** impressions for the query.
H4 Strengthen the Zlín page	**Why:** almost no competition for "tai chi Zlín"; add "tai chi" to its title and the client's Zlín facts. **Depends on:** client (C2). **Failed if:** still under ~250 words of unique text. **Watch:** Zlín query impressions.
H5 Complete the local schema	**Why:** venues lack postalCode, geo and class times; Organization lacks sameAs (YouTube, listings from H1). Add Event nodes once dates exist. **Depends on:** C2, H1. **Failed if:** Rich Results Test errors. **Watch:** rich-result reports in Search Console.

H6 Mobile LCP under 2.5 s	**Why:** lab mobile LCP is 2.7–3.1 s, mostly render delay from the font chain. Trim font files (drop rarely used weights/italic) and serve smaller hero images to phones. **Failed if:** PageSpeed mobile LCP still above 2.5 s on the production host. **Watch:** CrUX once traffic exists.
H7 A clearer beginner sign-up path	**Why:** sign-up is only by e-mail, and the home page's second action is an advanced sabre seminar flyer. Lead with "first lesson" information (client-supplied); a simple form is optional. **Failed if:** no measurable enquiries. **Watch:** mailto clicks.

Medium: first month

Action	Detail
M1 Mark up the articles	Split /clanky/ into one URL per article with author, translator and Article markup (after the client confirms the source).
M2 Lineage entities	Person nodes for Vincent Chu, Chu Gin Soon, Yang Sau Chung with sameAs; credentials for Daniel. Check the Chu Gin Soon parent relation against the text.
M3 Video metadata	Real descriptions (not the title), duration, upload dates in the right time zone.
M4 Security headers	Add a Content-Security-Policy (report-only first); limit /wp-login.php.
M5 "Proběhlo" marks	On Akce only the Thursday of the past seminar is marked; mark all three days. Quick code fix.
M6 Wording to check with the client	"dýchání tuina" (likely tu-na breathing, not tuina massage), mixed romanisation (cchi/čchi/qi), typos in the translated articles, health claims without a caveat.
M7 AI-training policy	robots.txt allows training crawlers (GPTBot, ClaudeBot, Google-Extended). Keep or disallow: a policy choice, not a defect.

Low: backlog

- /favicon.ico answers 302; make it 301 or serve the file.
- /category/uncategorized/ answers 200 (noindex); disable the archive.
- Add /.well-known/security.txt.
- The "Nabídka kurzů a lekcí" link under the timetable card is 18 px tall; make it a 44 px target.
- Defer complianz.min.js.
- The flyer for the sabre seminar is only an image; add its text.
- Kontakt mainEntity could reference the venues too.
- English page only if he teaches English speakers.
- Markdown delivery, ai-catalog.json, WebMCP: optional overhead for a site this size.

Verified as working

- All 12 pages return 200; unknown URLs return a real 404 (noindex).
- Old Webnode URLs: /prazdna-stranka2/ and /cviceni-na-akci-s-jirim-ledvinou/ 301 to /seminar-vincent-chu/, /reference/ 301 to /clanky/#co-je, /home/ 301 to /, /prazdna-stranka/ 410. Single hop.
- Self-referencing canonicals; tracking parameters canonicalise to the clean URL.
- Sitemap: exactly the 11 indexable pages, valid lastmod, no deprecated tags; privacy page noindex and excluded.
- robots.txt valid, declares the sitemap; internal search disallowed and noindex.
- Unique titles, descriptions and Open Graph per page; og:image 1200×630.
- One H1 per page; every image has alt text and dimensions; hero image prioritised, others lazy.
- JSON-LD: one valid @graph per page, every @id resolves, five VideoObjects on Videogalerie, no deprecated types, no events while all dates are past.
- Server-rendered HTML; no JavaScript dependency for content.
- Google Analytics blocked until cookie consent; YouTube and Maps load only on click.
- Hardening: user enumeration, xmlrpc.php and readme.html return 404; upload listing 403.
- Lighthouse mobile: Accessibility 100, Best Practices 100, SEO 100 (privacy page 69 by design: noindex).
- CLS 0 and TBT 0 ms on all measured pages; static page cache with brotli/gzip and long asset caching.
- No horizontal overflow at 390 px; tap targets 44 px (one exception, see Low).
- llms.txt present, every fact checked against page text.

Launch checklist (SEO)

1. Client supplies: phone, dates and prices, timetable, Zlín details, article source (C1, C2, H2, H4, M1).
2. Choose hosting and domain; deploy over https; rebuild so all URLs use the domain; purge and warm the page cache (C3).
3. Verify: `curl` the home page, sitemap.xml, robots.txt and llms.txt for "localhost" (must be none); Rich Results Test on Domů, Kontakt, Videogalerie.
4. Redirect or replace dan24.webnode.cz (C4).
5. Submit the sitemap in Google Search Console and Bing Webmaster Tools.
6. Create the Google Business Profile and Czech listings with identical NAP (H1); add them to Organization sameAs (H5).
7. After 4–6 weeks: re-run this audit on the live domain with Search Console and PageSpeed field data.

Method and limits

Ten parallel analyses with the claude-seo toolkit (v2.4.1), plus Lighthouse in Microsoft Edge and direct checks with curl. Scores are weighted: Technical 22%, Content 23%, On-Page 20%, Schema 10%, Performance 10%, AI Search 10%, Images 5%. Performance figures are lab data on localhost and understate real network latency. The search-experience review could not see localised google.cz results; the brand-mention scan was partly blocked. No field data, rankings or backlinks exist before launch.
